Portfolio | GitHub | LinkedIn

Profile

Full Stack Developer and Systems Engineering graduate building SaaS products with TypeScript, React, Next.js and PostgreSQL. Founder of GymRat+, a fitness and coaching platform with 60 users. Recent work includes AI customer support, agent orchestration, MCP tooling and supervised desktop automation.

Technical skills

TypeScript, JavaScript, React, Next.js, Node.js, REST APIs, PostgreSQL, Drizzle, Prisma, MongoDB, SQL, Docker, Git, Vercel, Azure AI Foundry, LLM integration, MCP, Flutter, Dart.

Experience

Founder and Full Stack Developer | GymRat+

2024 — Present · Self-employed · Remote

- Built training, nutrition and progress workflows, coach management, authentication, memberships and payments.
- Own the web product from interface and API development to PostgreSQL data models and deployment.

Full Stack Developer | Independent

2023 — Present · Self-employed · Remote

- Build products with React, Next.js, TypeScript and SQL/NoSQL databases, including identity, dashboards and deployment.
- Recent work includes Oruka and its customer provisioning tooling, agent orchestration and MCP integrations.

Mobile Application Developer | Smurfit Kappa Cartón Colombia

Aug — Nov 2025 · Part-time · Remote

- Developed ButterflyAR in Flutter and Dart to connect a printed butterfly book with interactive mobile augmented reality content.

Software Developer | Servicio Nacional de Aprendizaje (SENA)

Mar 2021 — Nov 2022 · Temporary contract · Remote

- Worked in a development team to build and maintain an internal system, contributing backend logic and administrative features.

Education and languages

Systems Engineering · Fundación Universitaria de Popayán
Graduated 26 June 2026. Spanish native; English B1 intermediate.

Selected projects

Oruka | 2026

https://www.oruka.si/en

- Built a unified WhatsApp and Instagram inbox with contacts, deals, knowledge-grounded AI agents and workflow automation. Previously named Steve and Senka. Designed isolated customer deployments with PostgreSQL, resumable provisioning and staged releases in Oruka Fleet.
- Working private beta and provisioning tooling. Early stage, with no users yet.

GymRat+ | 2024 —

https://gymratplus.com

- Founded and built a platform for training plans, nutrition, athlete progress and coach management, including authentication, memberships and payments. Implemented the web application with Next.js, TypeScript, PostgreSQL and Drizzle; native mobile clients are in development.
- Launched at gymratplus.com with 60 users, as confirmed in October 2026.

Frontier Lab10 | 2026

https://manuekle.github.io/lab10-hack/

- Built a TypeScript agent that observes a remote desktop over VNC, plans actions with a multimodal model and executes them under a supervisor. Added action budgets, timeout controls and SQLite traces so runs can be inspected and ambiguous actions can stop safely.
- Completed 45 of 56 hidden evaluation tasks in the Frontier panel on 11 October 2026. Detailed scoring pending.

creagent | 2026

https://creagent.fun/demo

- Built a visual composer for AI agents with reusable skills and exports for Claude Code, Codex, Cursor and Gemini CLI. Separated agent specifications from clients and published an MCP server as @manudev.jsx/creagent.
- Public demo and npm package. The application is source-available under FSL-1.1-MIT; the MCP server uses MIT.

Additional work

Cetamed: hospital hackathon MVP with synthetic data, 19 allowed query intents, voice and PDF reports. Forge: six specialist agents and an orchestrator produce versioned product plans using Azure AI Foundry. SIRA: QR attendance and academic reports with Next.js, MongoDB and Prisma.

Selected certifications

Building with the Claude API · Anthropic
Agents League Reasoning Agents · Global AI Community
Google UX Design · Coursera and Google
